

# SENDE SCHLUSS TECHRIDER

## Line-Up:

- 1 x E-Guitar (Line6 Helix Guitar Processor) + Vocals
- 1 x E-Bass (Line6 Helix Guitar Processor) + Vocals

## Microphones for vocals:

- 2 x microphones (SHURE SM58) Stage front

Please let us know if stands are available at the venue.

## Amplification guitar and bass:

- Guitar and bass (Line6 Helix) can be connected directly to the mixing console via XLR cable.

## Drums & additional instruments:

- The drums and other additional instruments are played from a DAW (Reaper)
- The backing tracks are made available to the FOH on three separate channels (drums left, drums right & additional sounds) via the in-ear rack.

## Monitoring:

- The band plays via an in-ear monitoring system and controls its own mix
- We both use a wireless in-ear set from Sennheiser (XSW IEM Set B-Band - 572-596 MHz)
- A Behringer ULTRALINK MS8000 splitter is installed in the rack
- All signals are sent unchanged from the splitters via the stage box to the FOH

## Stage equipment:

- We use a fog machine on stage (Stairville AF-180 LED Fogger). Please check with us to see if this could cause any problems with the fire alarm system
- Depending on the size of the stage and the distance to the audience, the band also uses two active full-range speakers (the box pro DSP 115) on stage to play the backing tracks

## Channels:

1 - Vocals Tim (VT)	2 - Vocals Weidner (VW)
3 - Guitar left (GL)	4 - Guitar right (GR)
5 - Bass (B)	6 - Drums left (DL)
7 - Drums right (DR)	8 - Additional Sounds (AS)

## Power supply (we need):

- 1 x power socket (type f plug) In-Ear rack side or back of stage
- 2 x power socket (type f plug) Line6 Helix
- 2 x multiple plug (type f plug) strobe and speakers (if used) left and right, side or back of stage
- 1 x power socket (type f plug) fog machine ideally front of Stage

*We do NOT have an own FOH!*

## BACK OF STAGE
